TITLE PAGE Digital Literacy Project Report Course Code: CSE0001

Name: Saksham Dave
Registration Number: 25BCE11155
Branch: CSE Core
Year: 1st Year
Institution: VIT Bhopal University
Date: (28/03/2026)

INTRODUCTION (100–150 words)

This project is based on the concept of digital literacy and its importance in today's world. As a student digital ambassador, the aim of this project is to understand and promote safe and effective use of digital tools and platforms. The project includes tasks such as creating an infographic, building a digital portfolio, exploring coding platforms, learning email etiquette, and understanding cybercrime.

Through this project, I learned how to use different online tools and platforms responsibly. It also helped me understand the importance of maintaining a professional online presence and being aware of online threats. This project has improved my digital skills and knowledge, which will be useful in my academic and professional life.

TASK 1: INFOGRAPHIC

For this task, I created a digital literacy awareness infographic using Canva. Canva is an easyto-use online design tool that helps in creating visually attractive content. My infographic included important topics such as the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence.

The design was simple and easy to understand so that students can quickly learn the key concepts. I used icons, colors, and short points to make the infographic more engaging.

While creating the infographic, I found it interesting to explore different design templates and customize them according to my needs. However, choosing the right layout and organizing the content properly was slightly challenging.

TASK 2: DIGITAL PORTFOLIO

For this task, I created my digital portfolio using platforms like GitHub and LinkedIn. GitHub is mainly used for storing and managing coding projects, while LinkedIn is used for building a professional profile and connecting with other students and professionals.

On GitHub, I created my profile and explored repositories. It will help me store my future coding projects and track my progress. On LinkedIn, I added my educational details, including my university and course. It will help me connect with professionals and explore internship opportunities.

In the next four years, I plan to use GitHub to upload my projects and improve my coding skills. I will use LinkedIn to build my network and stay updated with job opportunities. These platforms will help me in my academic and professional growth.

TASK 3: PLATFORMS

For this task, I explored coding and collaboration platforms. I created an account on HackerRank and practised basic coding problems. HackerRank is a platform used for improving programming skills and preparing for coding interviews. I explored its interface and understood how challenges are solved.

I also used Google Forms to create a Digital Literacy Awareness Quiz. The form included five questions related to digital safety and online practices. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed.

These tools will help me in my academic journey by improving my coding skills and enabling me to create surveys and collect data efficiently. Overall, this task helped me understand the importance of online platforms for learning and collaboration.

TASK 4: COMMUNICATION

Poor digital communication can lead to misunderstandings and problems. For example, if a student sends an email to a professor without a proper subject line or greeting, it may appear unprofessional and may be ignored. In some cases, using informal language or unclear messages can create confusion.

This situation could be improved by following proper email etiquette such as writing a clear subject, using polite language, and structuring the message properly. Professional communication is important in academic and professional life, and small mistakes can create a negative impression.

TASK 5: CYBERCRIME

While researching UPI fraud, I was surprised to learn how easily people can be tricked into losing money. Many fraud cases happen because users do not understand the difference between sending and receiving money. I also found that fraudsters use simple methods like fake calls and payment requests, which can confuse anyone.

This task helped me understand the importance of digital awareness and being cautious while using online payment apps. One habit I will change is that I will never accept unknown payment requests or share my UPI PIN with anyone. I will also make sure to verify all transactions before approving them.

CONCLUSION (100 words)

This project helped me understand the importance of digital literacy in today's world. I learned how to use online platforms like GitHub, LinkedIn, and HackerRank. I also gained knowledge about professional communication and cyber safety.

Overall, this project improved my digital skills and made me more aware of online risks and responsibilities. These skills will help me in my academic journey and future career.
